

Assembly set **STANDARD**

ETICS, VCW, CAVITY WALL

Classification/system components

Designation:	Special tools for the attachment of isorocket® permanent scaffold anchors for the construction of ETICS, VCW, cavity walls
rocketcutter:	Shortening device
rocketkey:	Assembly key
rocketgun:	Pressure gun (fast-drying composite glue rocketglue available separately)
rocketbit:	Bit insert
rocketbit magnetic:	Bit extension, magnetic
rocketslam:	Impact tool
rocketwrench:	Wrench
rocketfix:	Threadlocker
Article number:	9.9.900

Spare parts (available separately)

rocketfix:	High-strength threadlocker For heavy-duty bolted connections up to M25
rocketblade:	Spare blades for the shortening device rocketcutter (set of 2)

Product description:

Special tools are required for the professional and safe attachment of our **isorocket®** permanent scaffold anchors. The **isorocket®** assembly set Standard is the right choice for applying a external thermal insulation composite system to a façade for the first time, creating a ventilated curtain wall façade or cavity wall.

Central elements of this assembly set are the shortening unit **rocketcutter** and the assembly key **rocketkey**. The **rocketkey** primarily serves to securely attach the anchor body on the load distribution plate. However, the load distribution plate itself and the **rocketseal** cap can be attached easily using the **rocketkey**.

The shortening device **rocketcutter** ensures the clean removal of the protruding plastic neck of the anchor body at the façade level. This guarantees that you always achieve a perfect and even appearance without damaging the façade or the plaster. The pressure gun, wrench, and bit and bit extension are other useful tools required for ideal handling of the **isorocket®** scaffold anchor system.

Special tools necessary for the professional assembly of **isorocket®** permanent scaffold anchors for the construction of an ETIC system, a ventilated curtain wall façade or a cavity wall.
